The foreign data set was gutted this week in VAERS and the cancer signal was halved, the myocarditis dose 3 response signal was lost and 994 spontaneous abortions/still births were dropped

For starters...

As most of you know, me and a bunch of other people are monitoring VAERS data very closely week-by-week. This week (11.18.22), the first thing I noticed was that the Foreign data set was less than a fraction of the size it was last week (11.11.22): down from 283.51 MB to 96.81 MB. There is a disclaimer under the VAERS data that states the following, so this is not mistake.

Non-Domestic	96.81 MB	410.64 MB	86.89 MB	55.08 MB

Disclaimer: At the request of European regulators, CDC and FDA have removed certain data fields (country codes; reported symptom case narrative free text; diagnostic laboratory data free text field; illness at time of vaccination free text field; chronic conditions free text medical history field; allergies free text field) from foreign VAERS reports which were submitted to VAERS and may not comply with European regulations. Domestic (U.S.) VAERS reports are not affected by this process

Figure 1: https://vaers.hhs.gov/data/datasets.html.

I decided to process the data as I always do on Fridays.

The first thing I do when I analyze the VAERS data (after downloading) is compile the Domestic data set. Then I compile the Foreign data set. The I merge them along with the 2021 COVID-19 data. Then I count the numbers of VAERS IDs in both and do some basic descriptive statistics - like how many males versus females, age demographics, dose data and more. Then I start my grouped queries like death counts and severe adverse event counts, etc..

In the case of myocarditis, I always run the code over the Domestic, the Foreign and the combined data sets independently.

The first thing I noticed is that the myocarditis dose 3 response signal is gone. There is a 49% decrease in the number of myocarditis reports.

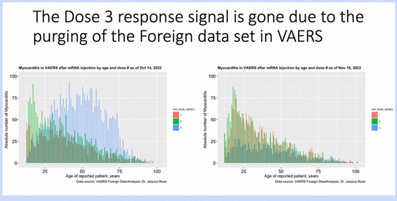

Figure 3: Myocarditis reports in VAERS Foreign data as of 10.14..22 (right) and as of 11.18.22.

The second thing I noticed was that 944 spontaneous abortions are missing.

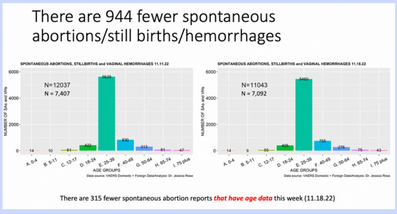

Figure 2: Spontaneous abortion, miscarriage, still birth and vaginal hemorrhages reports in VAERS as of 11.11.22 (left) and as of 11.18.22 (right).

The third thing I noticed was that the cancer reports, although they maintain a similar age distribution as the previous weeks, as shown in Figure 4, there is a 46% decrease in reports.

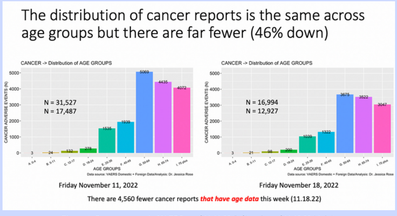

Figure 4: Cancer reports in VAERS as of 11.11.22 (left) and as of 11.18.22 (right).

There's so much more to cover, but I will update as time goes on.

See OpenVAERS for more.

The coverup goes on, but they can't hide the deaths. In the USA for 5 years before the jabs there were about 7700 deaths per day. Since the jabs there are 2460 more deaths per day according to Ed Dowd. That's a Pearl Harbor event every day and the media says nothing. And disabilities have jumped from 29 million to 33 million since the jabs. This is a stealth genocide.

Thank goodness you are paying attention. I assume you will be alerting Sen Ron Johnson.

This is one of the emails I received the other day. I get hundreds daily, and I am hearing you all.
This particular note spoke loudly to me and this lovely person gave me permission to share her words.
